## Plaswood Product Range - SIGNAGE

Plaswood recycled plastic signposts are an important feature of any well planned street, park, nature reserve or public area. Our recycled plastic furniture will not rot, splinter, crack or degrade with age. Our signage designs can be customised to your needs, and are also available with memorial plaques or corporate logo.

Plaswood signs have attained a high level of credibility since their initial development in 1984 and have proven to be the 'green alternative' to timber, metal and concrete signs. They require no maintenance and have no scrap value.

### FINGER SIGNAGE POSTS

#### FINGER POST INSTALLATION

An average below ground depth of 650mm leaving enough space, approximately the width of the post, either side of where the post is to be placed. As the hole is excavated, remove any stones, then fill with concrete and thoroughly compact around the base of the post.

Long nails or metal pegs could be used to key the post into the concrete. This will also aid stability. It is recommended that finger posts are installed to a maximum height of 2.5 metres above ground level. The fingers should be mortised into the post, three quarter through, and then glued and secured with two dowels.

#### ADDITIONAL OPTIONS

All posts can have either flat, bevelled or chamfered tops which enhance the finish of the signs product. Corporate logos can also be added, along with various text and font styles.

### STREET NAME PLATES

#### STREET NAME PLATES INSTALLATION

80mm square posts (legs of the sign) require a 450mm square x 450mm deep area, to both legs, for installation. Backfill with compacted concrete and use an anchor pin, long nails or metal peg, to key into the concrete and aid stability. Posts would either be mortised or plain, depending on whether the backboards need to be recessed into the posts or face fixed. Backboards can have a maximum of 12-13 letters per line where road name allows.

#### ADDITIONAL OPTIONS

All posts are available with either flat, bevelled or chamfered tops which enhance the finish of the signs product. Corporate logos can also be added, along with various text and font styles. We also offer Finger Posts, Waymarker Posts, Information Boards, Management Posts, Nature Reserve Signs, Nature Trail Signs and Roundabout Sponsorship Signs, which are all suitable for any outdoor environment.

### WAY MARKER SIGNS & BOARDS

#### WAY MARKER SIGNS AND INFORMATION BOARDS

A concrete foundation setting is recommended with a minimum of 500mm of the Plaswood post below the ground. Average waymarker sits around 1200mm above ground. Long nails or metal pegs could be used to key the post into the concrete. This will also aid stability.

#### ADDITIONAL OPTIONS

All posts can have either flat, bevelled or chamfered tops which enhance the finish of the signs product. Corporate logos can also be added, along with various text and font styles.
